INDIANA VITAL STATISTICS SUMMARY
1978

In 1978, Indiana births dropped, while deaths were up slightly. There were 83,348 resident births (15.5 per 1000 population) and 47,437 resident deaths which represented a rate of 8.8 per 1000 tying the previous three years for the lowest in the state's history. Comparable national figures were 15.3 and 8.8.

The fertility rate (births per 1000 females 15 through 44) at 67.3 was also down but remained above the U.S. figure of 66.4. The total fertility rate (lifetime births per 1000 females at current age specific fertility rates) was 1772, down from the previous year and just under the national rate of 1795. A rate of 2100 is necessary to maintain the population over an extended period of time.

There were 12,003 abortions reported as being performed in the state for a rate of 144.0 per 1000 live births. This figure is well below the rate for the country as a whole; but since many Indiana women go out-of-state for abortions, it is difficult to make precise comparisons.

There were 9 maternal deaths for a rate of 10.8 per 100,000 live births. Both figures marked an increase from 1977. The state did, however, for the 14th straight year, set a new low infant death rate (12.8 per 1000 live births), and the total (1065) was also the lowest on record. The U.S. infant death rate was 13.6.

Marriages (58,050) were up for the second year in a row after a four-year downtrend. The rate (10.8 per 1000 population) remained above the national figure of 10.3.

Indiana, based on U.S. Census Bureau-Indiana State Board of Health estimates, had its greatest annual population gain since the 1970 Census, an

increase of about 45,000 above the 1977 figure. The July 1, 1978, population is estimated at 5,374,600.

The ten leading causes of death for the state were:

Cause	Deaths 1978	Deaths 1977
Diseases of the Heart	18,032	17,938
Cancer	9,749	9,251
Cerebrovascular Disease	4,978	5,298
Diseases of the Arteries	1,761	1,782
Motor Vehicle Accidents	1,340	1,323
Accidents (exc. Motor Vehicle)	1,229	1,258
Diabetes Mellitus	1,106	1,013
Pneumonia	1,077	1,096
Suicide	648	689
Cirrhosis of the Liver	550	579

Diabetes passed pneumonia to become the seventh leading cause of death, while cirrhosis of the liver took over 10th place from certain causes of perinatal mortality even though cirrhosis deaths were down from the previous year. Diabetes (about 10 percent) and cancer (approximately 5 percent) showed marked increases, while cerebrovascular disease (stroke) was down over 5 percent. The other leading causes had relatively small changes in their totals.

Notes:

*Rates:

Births, Marriages and Total Deaths	- per	1,000 population
Deaths from Specific Causes	- per	100,000 population
Stillbirths and Infant Deaths	- per	1,000 live births
Abortions	- per	1,000 live births
Fertility Rate: Births	- per	1,000 females 15-44

Total Fertility Rate: The number of births 1,000 females would have in a lifetime if the fertility experience of 1978 prevailed. Calculated by taking the fertility rate for each five-year age group 15 through 44 (15-19, 20-24, etc.), adding, then multiplying by 5 (since each female would have five years experience in each age group). A total fertility rate of approximately 2100 is necessary to maintain the population on a permanent basis.

**Includes deaths listed in younger age groups

INDIANA VITAL STATISTICS SUMMARY
1979

In 1979, Indiana births were up both in numbers and rate. The total was 87,098 for a rate of 15.5 per 1000 population. Deaths were down by approximately 1000 to 46,427 for an all-time low rate of 8.6. Comparable national rates were 15.8 and 8.7 respectively.

The fertility rate (births per 1000 females 15 through 44) was up at 69.0 and remained slightly above the national rate. The total fertility rate (lifetime births per 1000 females at current age specific fertility rates) was up to 1835 but still well below the long-term population maintenance rate of 2100.

There were 14,658 abortions reported as being performed in Indiana for a rate of 168.3 per 1000 live births. This rate is well below national figures, but it is known that many Indiana residents go out-of-state for abortions.

Maternal deaths (3) and the rate (3.4 per 100,000 live births) were by far the lowest in the state's history. Infant deaths were up to 1119, but the rate remained at 12.8 per 1000 live births, tying the all-time low set in 1978. This marked the first time since 1964 that a new low rate had not been set. The 1979 U.S. infant death rate was 13.0.

Marriages (59,587) were up for the third year in a row. The rate (11.0 per 1000 population) stayed above the national figure of 10.5.

During the year, the estimated population of the state passed the 5.4 million mark with the July 1, 1979, estimate 5,400,300.

The ten leading causes of death for the state were:

Cause	Deaths 1979	Deaths 1978
Diseases of the Heart	17,835	18,032
Cancer	9,512	9,749
Cerebrovascular Disease	4,921	4,978

Suicide	602	648
Certain Causes of Perinatal Mortality	596	525

Certain causes of perinatal mortality passed cirrhosis of the liver to take over 10th place, with all other causes maintaining their 1978 positions. All of the leaders except accidental and infant causes showed declines from the previous year.

Table 1. RESIDENCE VITAL STATISTICS SUMMARY

Notes:

[1]Rates:

Births, Marriages and Total Deaths	- per	1,000 population
Deaths from Specific Causes	- per	100,000 population
Stillbirths and Infant Deaths	- per	1,000 live births
Abortions	- per	1,000 live births
Fertility Rate: Births	- per	1,000 females 15-44

Total Fertility Rate: The number of births 1,000 females would have in a lifetime if the fertility experience of 1979 prevailed. Calculated by taking the fertility rate for each five-year age group 15 through 44 (15-19, 20-24, etc.), adding, then multiplying by 5 (since each female would have five years experience in each age group). A total fertility rate of approximately 2100 is necessary to maintain the population on a permanent basis.

[2]Includes deaths listed in younger age groups

Table 2. VITAL STATISTICS SUMMARY, 1970-1979

NOTES

All Birth, Death, Abortion, and Stillbirth data by residence. Marriage data by occurrence.

Population estimates are in thousands and are those used at time vital rates were originally calculated.

Neonatal Deaths are under 28 days - Infant Deaths are deaths under one year.

1979 Deaths may not be exactly comparable to previous years due to some changes in coding procedures.

A - Abortion data not collected until May, 1973.
Rate is adjusted to whole year.

- Average and rate are adjusted to the 7-year period, 1973-1979.

NA - Not available

Part A. Births, Deaths and Marriages per 1,000 estimated population.
Abortions, Stillbirths, Neonatal and Infant Deaths per 1,000 live births.
Maternal Deaths per 100,000 live births.

Part C. Total Deaths per 1,000 estimated population. Deaths, specific causes, per 100,000 estimated population.
